DETAILED ACTION

Abstract

This application does not contain an abstract of the disclosure as required by 37 CFR 1.72(b). An abstract on a separate sheet is required.

Specification

§ 1.125 Substitute specification.

(b) A substitute specification, excluding the claims, may be filed at any point up to payment of the issue fee if it is accompanied by:

- (1) A statement that the substitute specification includes no new matter; and
- (2) A marked up version of the substitute specification showing all the changes (including the matter being added to and the matter being deleted from) to the specification of record. Numbering the paragraphs of the specification of record is not considered a change that must be shown pursuant to this paragraph.

(c) A substitute specification submitted under this section must be submitted in clean form without markings as to amended material. The paragraphs of any substitute specification, other than the claims, should be individually numbered in Arabic numerals so that any amendment to the specification may be made by replacement paragraph in accordance with § 1.121(b)(1).

The substitute specification filed 15 August 2003 has not been entered because it does not conform to 37 CFR 1.125(b) and (c) because while the substitute specification conforms to 37 CFR 1.125(b) and clean copy(form) was not submitted.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-13 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claims are generally narrative and indefinite, failing to conform with current U.S. practice. They appear to be a literal translation into English from a foreign document and are replete with grammatical and idiomatic errors. Please note that the use of the terms “adapted to” and “capable” are not positive limitations but only requires the ability to so perform. They do not constitute a limitation in any patentable sense.

In claims 1 and 8 the phrase “sustained elimination or reduction” is indefinite in that the scope of the phrase includes both a broad range or limitation together with a narrow range or limitation that falls within the broad range or limitation. Thus the resulting claims do not clearly set forth the metes and bounds of the patent protection desired.

In claims 1 and 8 the metes and bounds of the phrase “is comparable to or higher than $1/(4\tau)$ ” are indefinite. While higher than $1/(4\tau)$ is definite the scope defined by “comparable” is indefinite. The range covered by “comparable” is not defined.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 5-8, and 11-13 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Kersey et al(5,104,222).

Kersey et al teach a system for minimizing polarization induced noise(fading) comprising a laser(51), polarization scrambler(53), oscillator(55), Mach-Zehnder interferometer(63) which has two different paths(67,69), detector(73), and a signal processing unit(75,77) for producing the phase shift output. The oscillator drives the polarization scrambler with a high frequency f_{scram} which is higher than $1/(4\tau)$. Kersey includes all two path interferometers which includes Mach-Zehnder, Michelson, and Fizeau(low finesse Fabry-Perot). Note that the use of the terms “adapted to” and “capable” are not positive limitations but only requires the ability to so perform. They do not constitute a limitation in any patentable sense. With regard to claims 5-7; these claims are merely intended use and do not further the method of claim 1. See figure 5.
